Calibration:	To calibrate the product:
Periodic recalibration is recommended:	
Periodic recalibration is recommended: The Hovertrax 2.0 self-balancing features are calibrated to function with a detected "resting position" that is level. Over time and usage, recalibration may be needed to assure "level" status. If inaccurate calibration persists, this could affect the operation of the product by sending instructions to the motor(s) to move that may differ from the intended motion.	-Turn power OFFManually adjust the platforms so they are parallel to the groundTurn power ON and HOLD until it beeps and lights flash (approximately 15-20 seconds)Turn power back OFFCalibration complete. Once the product has been calibrated, no matter what position (angle) the platforms are in when it is turned OFF, the platforms with automatically
	self-balance themselves back to the calibrated position when turned ON.
	position when turned ord.
